Office of the City Improvement Trust Board
"Ranga Vilas", Seshadri Road,
Bangalore D/, the 21st September 1918

Engineer Officer's note on provision of a 9' diameter Stoneware rider line in 9th Cross Road, Chamarajapet for relieving the existing line of the storm water flow, during the rainy season

---

The existing line as per Comprehensive Scheme is of 7" diameter and is intended to take only sewage and no storm water, as it has been designed under the separate system It is now found that storm water collecting from houses and yards of the locality have been connected on to this line through gully traps and during rains the existing line gets discharges much above its intended capacity, causing choke up of the line and overflow through the man hole covers on to the street causing considerable nuisance and generally making the neighbourhood insanitary To relieve the existing line and take away the storm water, relief out-lets from two suitable man holes were provided as an experimental measure but when the line got choked or obstructed as it has happened at present these outlets brought out quite a lot of sewage to the open drains and people in the locality have been bitterly complaining of the bad smell and consequent unhygienic conditions So these outlets have to be closed and the only permanent remedy is to provide the ride line proposed The estimates and report accompany The matter is urgent and the application of the Board may be taken by circulation and the Municipality may be requested to place the necessary funds at our disposal for taking up the work
